

Sepacore® Easy Purification Systems

Your first step into controlled separation

You routinely purify your samples on an open glass column and have to cope with a limited resolution and a long separation time. As a first step towards automation, we offer two small systems: the “Easy Synthesis” and the “Easy Extract” systems allow you to control the flow rate and the eluent composition.

Improved separation

Fine-tuned resolution using gradient elution

Time and money saving

Speed up the separation and use less solvent

Easy and safe

Intuitive use with reduced solvent exposure

Easy Purification Systems: Your most important benefits

Improved separation

- Optimized separation efficiency using gradient elution
- Controlled separation with precise monitoring of eluent composition
- Increased purity of the collected fractions

Time and money saving

- Reduced elution time with controlled flow rate and solvent composition
- Smaller fraction volume for a faster evaporation
- Decreased purification cost due to lower solvent consumption
- Cost effective initial investment with upgrade possibilities

Easy and safe

- Intuitive control of pumping parameters
- Minimized solvent exposure
